

# *How to Propagate Rosemary*

*Rosemary is a symbol of friendship, loyalty and remembrance*

## INSTRUCTIONS:

- Use a clean pair of scissors or clippers (you can wipe with alcohol) and snip a branch from your existing rosemary bush. Peel the needles from the bottom half of the stem.
- Place the stem in a bottle (a good use for your empty Betty Buzz bottle) with water making sure that the needles are not submerged.
- Watch for roots to form. Plant in dirt once roots have formed.
- Voila, you have a new plant!
